

Cardboard Tube Uses

Wrapping paper tubes are wonderful for storing Interfacing, Wonder Under, Steam-a-Seam, Fusible Fleece and other like products.

Rolling interfacing and fusibles prevents creases, keeps directions with product, and makes them easy to store.

- Cut tube to slightly longer than width of interfacing
- Wrap interfacing and directions (if you have them) around tube
- Cut remaining (cut off) end of tube along length
- Mark number and type of interfacing or fusible on cut off tube end
- Pop tube end with information around wrapped interfacing/fusible

Tube end will hold interfacing in place without pin holes or mess
